You can make a pointy rocket top by covering a tube with tin foil. Ask a grown-up to help you cut a door in your rocket. Make it look special with paper, paints and glitter.

2

To make the rocket body you'll need lots of extremely useful boxes. Cover them with paper and foil to make them look like they come from space.

3

Cups make the best rocket parts! You can cover them with foil and strips of coloured paper. You will need lots of glue for this and be careful, because it can be very messy.

Next, you'll need some rocket blasters! You can make really absolutely brilliant blasters with some yoghurt pots and some card.

Now your rocket is finished! What planets will you visit when your rocket blasts off into space?

Your rocket is really nearly ready! Next you have to put all your boxes together to make your rocket look extremely very big.
